

Elegant access solutions

With the Secustos family of RFID readers, elegant design meets exceptional performance. Designed for modern access control applications using RFID, BLE or NFC, Secustos is a universal reader that integrates perfectly into any environment.

Secustos: A perfectly integrated reader for physical access control

Physical access control is an integral part of modern building security and “Smart Building” applications. With Secustos, access control blends seamlessly into the physical environment and the wider security software ecosystem. Modern design and durable glass and metal construction complement both contemporary and classic architecture. Powerful software and flexible integration options allow these readers to fit into any security concept.

Universal readers

Secustos readers are universal, meaning they support virtually any LF or HF radio-frequency identification (RFID) transponder technology along with mobile credentials using near-field communication (NFC) or Bluetooth® Low Energy (BLE). That allows integrators to support whatever technologies are currently in use and provide flexibility for the future.

Easy installation and integration

Field-proven cable connection technology and a mounting frame in the same color and design enable a perfect installation in either a flush-mounted box or on the wall. With a range of interface options including OSDP and Weigand, integration is seamless.

Durable outdoor-rated construction

Made from high-quality glass and metal in bright silver or classic grey, Secustos readers are built to withstand wind and weather in outdoor physical access applications. Available with or without integrated keypad.

Advanced encryption and tamper-proof design

Physical access control solutions require a high degree of physical and cyber security, and Secustos is built for both. The readers support advanced encryption with OSDP and come with a built-in proximity sensor and tamper switch to ensure a high level of security.

Flexible and future-proof

Keeping everything up to date is simple with secure remote configuration capabilities or onsite updates via OSDP or contactless mobile app. The SecoTool enables easy firmware configuration and customization, while the mobile Seco App allows fast field configuration using an Android device.

Unmatched support for installers and integrators

sesamsec offers unparalleled support for partners to ensure a smooth implementation of the access solution. From cloud-based tools for “Physical Access Control-as-a-Service” (PACaaS) to the Partner Portal, Secustos readers are backed by a full suite of professional services to make installation, configuration and management simple.
