

## Flexible, scalable, and integrated: Access solutions from sesamsec are ideal for every project

June 05, 2024

*As the importance of building security continues to grow, this also increases the demands on physical access control. However, building owners, architects, and integrators often have very individual requirements with respect to the technology and design. It is therefore good when solutions can be integrated flexibly and scalably, as is the case with the readers in the Secustos product family from sesamsec.*

### **One for all: Universal readers make security fit for the future**

Secustos physical access control readers can read more than 60 RFID technologies and are compatible with all common transponder technologies. This applies to both physical transponders, such as cards, and also mobile credentials, since the solution also maps all mobile technologies such as NFC, BLE, LEGIC Connect, HID Mobile, and Apple

Employer Badge. This means that one reader can be installed for all areas of application – with corresponding advantages in terms of flexibility, scalability, and cost savings.

### **Needs-based product lines guarantee efficient security in a wide range of application scenarios**

The requirements regarding physical access control systems vary greatly – depending on where access is to be controlled, how sensitive the environment is, or how many users or user types and authorization levels there will be. In general, the principle applies: As complex as necessary, as simple as possible. The Secustos product family applies this principle optimally, with three different product lines that differ in terms of features and performance characteristics. Planners and installers can thus find the ideal solution for every application scenario and can cost-effectively opt for precisely the equipment that meets their individual needs – be it the basic equipment for cost-sensitive projects or the maximum solution for buildings with the strictest demands on security and flexibility.

### **Three strong pillars for one solution: Hardware, software, and service**

High-quality hardware plus suitable [software](#) plus strong [service](#): This is the formula for success in the case of Secustos readers. The software is at the heart of the access solution and enables simple integration and further development of the system in line with the requirements of planners and building owners. The SecoTool and the Seco app for Android devices ensure that configuration and updates can be carried out quickly and easily both remotely and on site. The innovative combination of a powerful tool and a user-friendly app clearly sets the Secustos product family apart from the competition. And if there are any questions, sesamsec offers unrivaled partner support – including “Physical Access Control as a Service” (PACaaS) as an all-round, worry-free solution. Installers who opt for this solution can simply click and access it after signing

the contract. sesamsec takes care of the rest, such as regular updates, remote maintenance, and much more.

Find out more [here](#) if you too want to take the security of your building to the next level.
